EDUCATION

Bachelor of Science, Computer Science

August 2023 – May 2026

Wichita State University, Wichita, KS

Relevant Coursework: Ethical Hacking (CS 352), Introduction to Cybersecurity (CS 356), Cryptography (CS 656)

Associate of Science, Liberal Arts

August 2021 – May 2023

Butler Community College, Wichita, KS

TECHNICAL SKILLS

Networking & Security: Wireshark, Nmap, John the Ripper, Hashcat, TCP/IP, DNS, NFS, SSH, Tailscale VPN, Firewall Configuration, PKI / Certificate Management

Systems & Platforms: Linux (Nobara, Arch, Ubuntu), Docker, Azure DevOps, GitHub, NAS Administration

Languages & Scripting: Python, Bash, C++, TypeScript, JavaScript, .NET (C#), PL/SQL, Node.js

Databases: PostgreSQL (Supabase), Oracle, MongoDB, Firebase

RELEVANT EXPERIENCE

Software Engineer Co-Op

November 2025 – Present

Flint Hills Resources | Koch, Wichita, KS

- Configured Docker devcontainers with enterprise PKI certificates to enable secure package installation behind corporate firewall policies.
- Diagnosed and resolved infrastructure issues across legacy .NET applications serving 100+ internal users on multiple accounting platforms.
- Contributed to Node.js Lambda function upgrades and EventBus publisher infrastructure supporting cloud-based service communication.
- Migrated NuGet logging platform dependencies and updated library integrations across multiple services to maintain system reliability.

Software Engineer Intern

March 2024 – November 2025

Integra Technologies, Wichita, KS

- Supported enterprise application infrastructure serving 200+ internal users across ERP system modules built on Oracle and Oracle APEX.
- Wrote PL/SQL queries to manage and secure enterprise Oracle databases, enforcing data integrity across cross-team workflows.
- Diagnosed and resolved 10+ system and database issues weekly, reducing downtime and improving operational turnaround time.

SECURITY & NETWORKING PROJECTS

National Cyber League (NCL) – Team Competition

Fall 2025

- Competed in the NCL Fall 2025 season, achieving a top 1000 national team placement across cryptography, network traffic analysis, log analysis, and forensics challenges.
- Decrypted encrypted messages and performed CTF-style challenges using Wireshark, John the Ripper, and Hashcat.

Homelab Network Infrastructure

Ongoing

- Built and configured a 3.6TB NAS server on Linux with ext4 filesystem, NFS exports, and automated mounts via fstab for persistent storage.
- Configured secure remote file access from macOS over Tailscale mesh VPN, troubleshooting NFS permissions, UID mapping, and firewall zone rules.

Ethical Hacking Coursework (CS 352)

Wichita State University

- Performed network reconnaissance and host discovery using Nmap across lab environments.
- Captured and analyzed network traffic with Wireshark to identify protocols, anomalies, and potential attack vectors.
- Cracked password hashes using John the Ripper and Hashcat with dictionary and brute-force techniques.
